

The Filter – Lab Info Tutorial- Illinois Crop Improvement

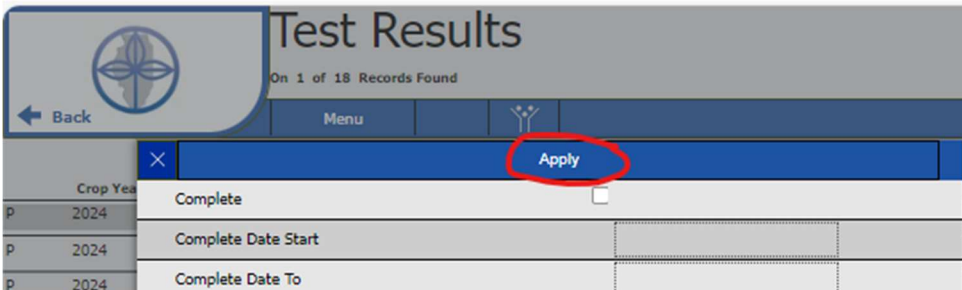

1. Once logged into the Lab Info site, choose “Seed Lab Results.”

2. The filter, represented by the “dots in a funnel” icon, is where you can filter (search) for lot numbers, varieties, and additional data points that identify the samples you have submitted to Illinois Crop Improvement. We will refer to this icon as the “filter” throughout this tutorial.

3. You can filter your results by partial or complete lot numbers and other factors available on the filter menu. Please note that you must click apply once you have entered your filter criteria. The enter key will not initiate a filter (search).

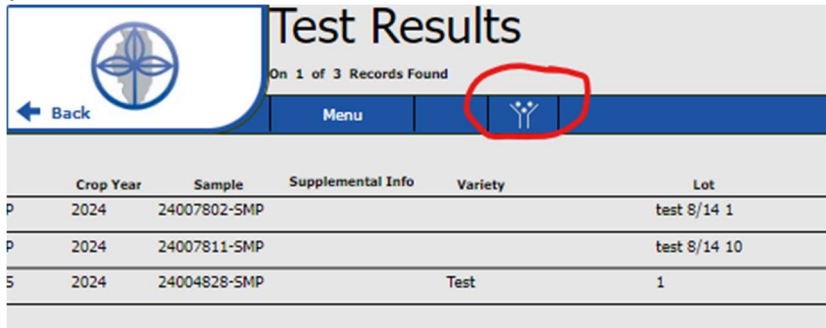

4. In the following example, we have already filtered by Illinois Crop’s internal account, where test samples are entered.

The screenshot shows the 'Test Results' page with a table of test results. The table has columns for Crop Year, Sample, Supplemental Info, Variety, Lot, and Grade.

	Crop Year	Sample	Supplemental Info	Variety	Lot	Grade
P	2024	24008415-SMP			Testing IPG Corn	
P	2024	24007803-SMP			test 8/14 2	
P	2024	24007804-SMP			test 8/14 3	
P	2024	24007806-SMP			test 8/14 5	
P	2024	24007807-SMP			test 8/14 6	
P	2024	24007808-SMP			test 8/14 7	

5. Note: if you recycle lot numbers, year-over-year, you may need to apply a specific crop year or a sample date range that we will discuss later.

- It is important to return to the filter by clicking the filter icon again. The back button will return you to the main screen.

- To enter a new lot number, it is highly recommended that you clear the field by clicking on the "X" to the left of the filter criteria. While you can try to overwrite the field the information will be somewhat distorted by the fact that the new input will appear over the previous input and may populate other fields (example on right). Future releases may correct this issue, however clearing the field is the best option.

- Note: In addition to the intuitive filter features of lot number and variety, other filtering features should be explained to all new users to help them better understand the features of the lab info system. The "Include" and "omit" buttons can be used to include or exclude your filter parameters, as this tutorial will demonstrate.
- IF you have access to multiple accounts (locations), you will have full access to all samples across all accounts by default. Enter the Illinois Crop Improvement Customer Number assigned to the location to narrow the filter by clicking on "customer."

You will then be presented with the accounts available to you. Please call the office if you need assistance with accessing all of your accounts.

10. Crop names are provided as a filter criterion if there are samples in the system for those crops. If you do not see the intended crop, common or scientific name, there is no sample in the system for that crop. When selecting names, choose only the common name or the scientific name, as they share the same "crop code." Selecting the common name will populate the search with the scientific name based on crop code. All reports will show your preference for the common name or scientific name.

11. "Complete" is short for "sample completed." It can be selected to show only samples that have been completed, no samples with partial or preliminary results will be shown when you apply the filter and the Complete box is checked and the Inc for "include" is selected.

The screenshot shows a blue 'Apply' button at the top. Below it, the 'Complete' checkbox is checked, and the 'Inc' button is highlighted in blue, indicating it is selected.

Complete – Included Example

Crop Year	Sample	Supplemental Info	Variety	Lot	Grade	Crop ID	Crop Name	Class	Received	Status	Completed	Estimated	PDF	Copied On Customer
2024	24007802-SMP			test 8/14 1	1		SOYBEANS	N	8/14/2024	Completed	8/14/2024		Report	6604-CUS
2024	24007805-SMP			test 8/14 4	1		SOYBEANS	N	8/14/2024	Completed	8/14/2024		Report	6604-CUS
2024	24007812-SMP			test 8/14 C1	2		CORN	N	8/14/2024	Completed	8/14/2024		Report	6604-CUS

12. By selecting omit, you can see all active or incomplete samples.

The screenshot shows the 'Apply' filter bar with the 'Complete' checkbox checked and the 'Omit' button highlighted in blue, indicating it is selected.

Complete – Omit Example

Crop Year	Sample	Supplemental Info	Variety	Lot	Grade	Crop ID	Crop Name	Class	Received	Status	Completed	Estimated	PDF	Copied On Customer
2024	24008415-SMP			Testing ZPG Corn	1		SOYBEANS	N	8/19/2024	Active				6604-CUS
2024	24007803-SMP			test 8/14 2	1		SOYBEANS	N	8/14/2024	Active				6604-CUS
2024	24007804-SMP			test 8/14 3	1		SOYBEANS	N	8/14/2024	Active				6604-CUS
2024	24007806-SMP			test 8/14 5	1		SOYBEANS	N	8/14/2024	Active				6604-CUS

13. "Complete Date Start" and "Complete Date To" allows you to insert a date range for completed samples. For example, if you wish to see all completed samples between June 1, 2024 and Aug 1 2024 enter the dates in short format 6/1/24 to 8/1/24

The screenshot shows the 'Apply' filter bar with the 'Complete' checkbox unchecked. Below it, the 'Complete Date Start' filter is set to '6/1/24' and the 'Complete Date To' filter is set to '8/1/24'. Both filter buttons are highlighted in blue.

14. "Received Date Start" and "Received Date To" is very similar in that it allows you to sort by the date the samples were received at the laboratory.

The screenshot shows the 'Apply' filter bar with the 'Received Date Start' filter set to '5/1/24' and the 'Received Date To' filter set to '8/1/24'. Both filter buttons are highlighted in blue.

15. "Sample" is short for "sample number" and is useful when you know the Illinois Crop sample number. You must have the entire Illinois Crop Sample number. A result of "no sample found" will appear if you enter a partial sample number in the Sample field.

The screenshot shows the 'Apply' filter bar with the 'Sample' filter set to '24005127'. The filter button is highlighted in blue.

16. "Supplemental Info" is data provided by the customer and requested by the customer to be added as an additional identifier. This may include SKU numbers, seed size, batch numbers and other identifying characteristics.

The screenshot shows the 'Supplemental Info' filter field, which is currently empty.

17. "Sample Type" is the Illinois Crop laboratory providing your testing service. While unnecessary, you can filter by individual lab or any combination of labs by selecting G for Greenhouse trait testing, P for IPG Identity Preserved Grain testing, and S for Seed Lab testing. Selecting all three labs will not yield anything but the standard or default presentation of your samples.
